

Sprint 1 Report

Product Name: Jukebox

Team Name: 4 8s and a Crown

Date: 10/18/16

Stop Doing:

Because the Spotify Web API only allows for 30 second playback, we stopped all development on React for web and moved development to Android Studio.

Start Doing:

We should stay more on task during Scrum meeting discussion so that we can get more done in one meeting time. Staying on task will also help meetings go faster so that we can get more done in a shorter period of time.

We should communicate more about our individual work to help other team members more accurately know what the other members have done.

Keep Doing:

Communication is going really well and meetings are very easy to set up. Stay motivated to learn new software and programming languages (Android Studio, XML, etc.)

Work Completed/Not Completed:

User Story 1: Not Complete

Because of reasons stated above, we could not use React, but we setup the Android framework.

User Story 2: Not Complete

We reevaluated and determined we weren't going to use Triton. We've switched to Firebase, but do not have it set up yet.

User Story 3: Not Complete

The login page's code is complete and mostly functional, but connects to an empty page, so isn't fully functional.

User Story 4: Not Complete

The player's code is complete and theoretically functions, but runs conditionally on being logged in.

Work Completion Rate:

Total User Stories Completed: 2

Total Ideal Work Hours: 24

Total Number of Days: 15

~ 74% Done
